## PROJECTS

### Fitness Tracker App

- Developed using React.js, TypeScript, Redux, React Router, IndexedDB
- Allows users to create and manage exercises, workouts, and goals
- Includes daily logging features for progress tracking: exercises, goals, activities, nutrition
- Interactive dashboard for monitoring daily progress

### Fitness API

- Developed to support the Fitness Tracker App, also usable as a standalone service via a web portal
- Full CRUD functionality for exercises, workouts, equipment, posts, and guides
- Authentication and authorization using JWT, bcrypt, role-based access, and user management (login, register, logout)
