PROJECTS

Fitness Tracker App
A personal fitness tracking web app that let users manage and do exercises and workouts, and that helps users log workouts, monitor goals, and track their progress through an interactive dashboard. Designed for a clean and intuitive user experience, with features supporting long-term habit formation.
Technologies: React.js, TypeScript, Redux, React Router, CSS, IndexedDB

Fitness API, Work in progress
An API developed to support the EasyFit application. It handles users, workouts, exercises, and social features such as guides and posts, with secure authentication and modular endpoints.
Technologies: Node.js, Express.js, MongoDB, JWT, Bcrypt

API Dashboard, Work in progress
A companion web platform to the EasyFit app, designed for desktop use. It offers advanced tools for planning workouts, meal plans, and tracking progress with greater precision. Aimed at users who want deeper insights and more control over their fitness journey, the dashboard includes extended social features, progress analytics, and detailed data management.
Technologies: React.js, TypeScript, Redux, TailwindCSS, REST API Integration

Other projects

Pomodoro timer - A clean and customizable Pomodoro timer that helps improve focus and productivity. Includes a built-in task manager, multiple themes, and flexible settings for session control. Built with React.js and Redux

Event Management App - A full-stack app created after finishing a Web Dev Bootcamp to test my knowledge. It is made of two parts, the front-end, built with ReactJS, and the back-end, made with ExpressJS, passport, and MongoDB.
